U.S. Citizen | Eligible for and willing to obtain a U.S. government security clearance

PROFESSIONAL SUMMARY

CompTIA Security+ certified CyberCorps® Scholarship for Service scholar pursuing a Bachelor of Science in Business Administration, Computer Information Systems, at California State Polytechnic University, Pomona; expected May 2028. Hands-on experience in Linux security, vulnerability remediation, virtualized infrastructure, identity and access management, and competition-based incident triage. Seeking a government cybersecurity internship and post-graduation public-service role protecting systems, networks, information, and critical infrastructure.

CYBERSECURITY AND TECHNICAL SKILLS

Security operations: vulnerability and misconfiguration assessment; secure configuration and system hardening; incident triage
Network, systems, and identity security: Active Directory account and permission administration; virtual LANs (VLANs); firewall configuration
Cloud and virtualization: Proxmox Virtual Environment (VE), virtual machine provisioning, virtual networking; exposure to Amazon Web Services (AWS) infrastructure and EC2 through CyberForce and coursework
Operating systems: Debian-based (Ubuntu, Kali Linux), RHEL-based (CentOS), Windows Server
Programming and databases: Python, Java, Bash, SQL
Technical communication: Security presentations, hands-on workshops, vulnerability documentation, remediation recommendations

EDUCATION

Bachelor of Science in Business Administration, Computer Information Systems **Expected May 2028**
California State Polytechnic University, Pomona *Pomona, CA*
GPA: 3.98
Scholarship: CyberCorps® Scholarship for Service (SFS) Scholar, Cal Poly Pomona SFS Program, August 2026-Present
Relevant coursework: CIS 2650 Contemporary Operating Systems; CIS 2100 Programming for Business (Python); CIS 3050 Database Design and Development (SQL); CIS 2900 Object-Oriented Programming for Business (Java)

CERTIFICATION

- CompTIA Security+ (SY0-701), earned August 30, 2025; active

WORK EXPERIENCE

Student Director and Hill Family Fellow, Mitchell C. Hill Student-Run Data Center **July 2026-August 2026**
California State Polytechnic University, Pomona *Pomona, CA | 10 hours/week*
- Administered a multi-node Proxmox VE environment, provisioning VMs and configuring virtual networks and VLANs for student labs and projects.
- Managed Active Directory user accounts and permissions to control access to Student Data Center resources.
- Maintained physical data-center infrastructure and helped install an uninterruptible power supply (UPS).

LEADERSHIP EXPERIENCE

Director of Competitions **August 2026-Present**
Cal Poly Pomona Students With an Interest in the Future of Technology (SWIFT) *Pomona, CA | 6 hours/week*
- Direct development of SWIFT's in-house cybersecurity competitions and team tryout environments.
- Plan a Purple vs. Purple exercise and a Red vs. Blue competition, including challenge design and infrastructure.

Competitions Officer **August 2025-May 2026**
Cal Poly Pomona Students With an Interest in the Future of Technology (SWIFT) *Pomona, CA | 3 hours/week*
- Helped set up the 2026 Red vs. Blue competition environment by domain joining machines and planting misconfigurations for the red team to exploit.

CYBERSECURITY COMPETITION EXPERIENCE

Collegiate Cyber Defense Competition (CCDC) – Team Member **August 2026-Present**
Cal Poly Pomona CCDC Team *Pomona, CA | 7 hours/week*
- Selected for the team after a competitive preseason bootcamp; training to defend Linux and Windows networks against live red-team attacks.
- Built a multi-OS Active Directory domain: promoted a Windows Server to domain controller, joined a Debian VM, and restricted remote access and file shares to authorized accounts.

NCAE Cyber Games – Web Service **March 2026**

National Security Agency (NSA) *Pomona, CA*

- Reviewed a Python Flask app's source code and remediated multiple web vulnerabilities — including template, command, and SQL injection — using parameterized queries, input validation, and access controls.
- Hardened and deployed the flask app on Proxmox VE behind a reverse proxy, with a restricted systemd service, iptables rules, and SSL certificates from the competition's internal CA, to sustain uptime during the live competition.

CyberForce Competition - Linux Team Member **September 2025-November 2025**

U.S. Department of Energy | Six-person team *Tinley Park, IL | approximately 15 hours/week*

- Defended Linux services in an AWS-hosted live adversarial competition.
- Co-authored a vulnerability assessment documenting 100+ vulnerabilities and misconfigurations with prioritized remediation recommendations.
- Recommended infrastructure and monitoring improvements in a simulated executive briefing to strengthen incident-response readiness for an industrial control systems (ICS) environment.

CYBERSECURITY PROJECTS AND LABORATORY EXPERIENCE

CyberForce Team Tryout Environment - Designer and Lead **September 2026**

Cal Poly Pomona Students With an Interest in the Future of Technology (SWIFT) *Pomona, CA*

- Built a CyberForce tryout environment to evaluate and select incoming members, seeding a Debian VM with a dozen Linux vulnerabilities and misconfigurations for candidates to find and remediate.
- Deployed a Dockerized CTFd platform with challenges across six categories

Linux Hardening Presentation and Workshop - Presenter **March 2026**

Cal Poly Pomona SWIFT weekly club meeting *Pomona, CA*

- Designed and led a hands-on Linux hardening workshop for ~15 participants, building a Kali and Ubuntu lab with vulnerabilities spanning initial access, privilege escalation, and persistence.
- Guided participants in finding and fixing common Linux misconfigurations, such as a sudo rule allowing passwordless root, a SUID binary enabling privilege escalation, or an extra UID 0 (rogue root) account, reinforcing least privilege and defense in depth.
