COMPETITIONS

Cyberforce

September 2025 - November 2025

U.S Department of Energy

Tinley Park, IL

- Recommended infrastructure and monitoring improvements using OPNsense, Velociraptor, and Ansible AWX to strengthen incident response readiness in a simulated C-Suite presentation regarding ICS environment
- Maintained service availability hosting web, mail, file sharing, and remote access services during a live adversarial competition through continuous system monitoring, incident triage, and rapid remediation.
- Conducted a comprehensive vulnerability assessment, identifying and documenting **100+** security flaws with prioritized remediation recommendations.
- Utilized Wazuh SIEM to review security alerts and support defensive monitoring activities during a live cybersecurity competition.

EXPERIENCE

Competitions Developer

August 2025 - Present

Cal Poly Pomona SWIFT

Pomona, CA

- Designed and maintained hands-on cybersecurity lab environments simulating Linux attacks, defensive monitoring, and system hardening scenarios for student training.
- Developed hands-on Linux and web security lab scenarios focused on misconfigurations, privilege escalation, and insecure service deployments for training exercises
- Led structured cybersecurity training sessions on Linux hardening and access control, guiding participants through attack detection and remediation workflows.

PROJECTS

Hardening Linux Presentation & Workshop

March 2026

- Delivered a technical presentation on Linux security threats, system monitoring, and hardening techniques to 15 participants.
- Led a hands-on workshop using a Kali vs Ubuntu lab to simulate end-to-end attack and remediation workflows
- Demonstrated common Linux attack paths and applied hardening controls including firewall configuration and least-privilege access policies.

Web Application Security Lab (Competition Environment)

March 2026

- Identified and remediated critical web application vulnerabilities in a Python Flask environment
- Secured PostgreSQL integration by enforcing proper input handling, parameterization, and access controls
- Implemented SSL/TLS to protect data in transit and reduce exposure to interception and injection attacks
- Operated in a timed, adversarial environment requiring rapid identification and mitigation of active exploits

HONORS & AWARDS

CyberCorps: Scholarship for Service (SFS) Scholar

2026

- Selected for the federally funded CyberCorps Scholarship for Service program supporting the development of cybersecurity professionals for government service.

CERTIFICATIONS

- *CompTIA Security+ (SY0-701)*

TECHNICAL SKILLS

Languages: C, Python, SQL, Bash

Developer Tools: Git, Docker, Microsoft Office 365, VS Code, Google Workspace

EDUCATION

California State Polytechnic University , Pomona

Pomona, CA

Bachelor of Science: Business Administration in Computer Information Systems
Expected Graduation: December 2027 — Current GPA : 3.98

Aug. 2024 – Present
